EXPERIENCES

Merit Risk Management and Consultancy
Junior Web Developer - Full Time

Developing high-volume, low-latency applications for critical systems, delivering high-availability and performance. Software development activities in the industrial communication domain, including design, implementation, documentation and testing.

OCTOPUS Property Management System
Intern Software Developer - Internship

Participating in peer code reviews to improve the quality of code written by other team members. Creating prototypes of new technologies and features for potential incorporation into future products. Debugging computer code to fix errors and improve performance.

Evatro Software Information Technologies Inc.
Intern Software Developer - Internship

Implements developer tools or product features under the direction of a senior developer. Tracks job assignments and completes status updates using internal tools. Works in an Agile development methodology, attends standups, defines user stories, and implements development tasks. Completes code reviews and unit tests.

Globit Global Information Technology GmbH
Software Developer - Full Time

As a Java developer, I utilized Java, Javascript, ORM (JPA, Hibernate), Vaadin, RESTful Web Services, HTML, CSS, XML/XSL, JSON, and PostgreSQL to improve existing software systems and develop new ones. Additionally, I developed mobile applications using Xamarin. I adhered to coding standards, participated in the software development process, wrote high-quality code, and performed software testing and debugging. I collaborated with other software developers and project managers to ensure effective communication and teamwork.
